

Xymiot is an Edge-to-any decentralize end-to-end system integration service to transfer, pre-processing, and analyse data from local devices to on-premise or cloud-based solution architectures. Xymiot dotes with smart data management and real-time processing capabilities to the most valuable components into the value chain to increase their efficiency and to avoid frequent downtimes, continuous delays and information redundancy.

Our solution includes:

- Edge-centred optimal performance;
- Device-to-Device communication protocols;
- IoT Hub;
- Edge-to-any data processing and transfer;
- and digitalization of processes and services.

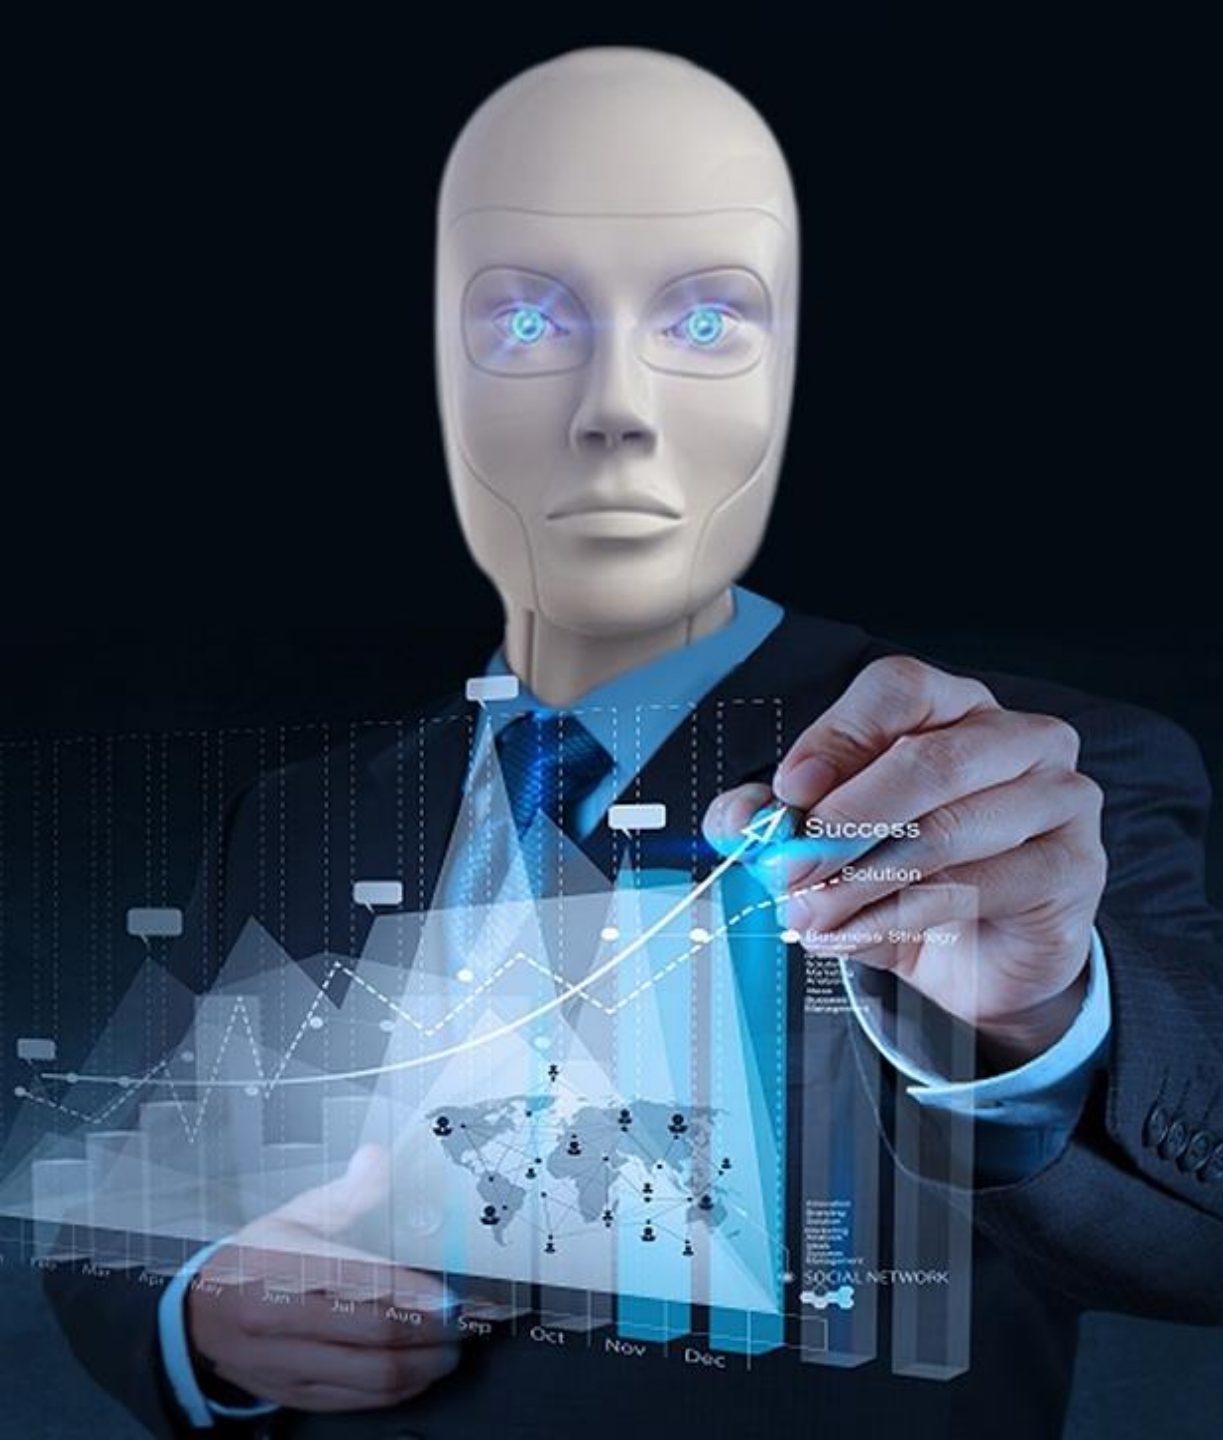

Figure of merits: Empower edge, End-to-end distributed architecture, Infrastructure robustness
